Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant argues that Mankovitz et al has no means to improve the scanning. Examiner points out that Mankovitz et al inherently has "sufficient" contrast, pixel quality, strobing, etc because the device of Mankovitz et al is assumed to work. Applicant's noted problem that cell phones, pdas, etc typically have poor displays is moot without the claims requiring a cell phone, pda, etc. Mankovitz et al is clearly motivated to provide operative scanning. Further, as applicant points out in the spec, the displays can be lower quality as long as they work with the associated scanning equipment. Applicant argued that Mankovitz et al does not teach the plural barcode formats. Mankovitz et al indeed teaches different coupon formats - the alphanumeric coupon can be taken to be a second barcode format, as it is a different version of the UPC barcoded coupon. Applicant argued that Mankovitz et al does not teach decryption in the coupon device. Examiner points out that Mankovitz states that the coupon data is "encrypted to avoid use by systems other than authorized [devices]." This is taken to teach that the system stores encrypted coupon data in the portable device. This prevents unauthorized coupon devices from being used. .
